HydroLogic[®]
PURIFICATION SYSTEMS

Take Control Of Your Water Quality

urban-gro partners with HydroLogic to provide efficient, high-end commercial water filtration systems. For over a decade, HydroLogic Purification Systems has been the leading water filtration manufacturer in the industry, helping cultivators diagnose and solve every water problem imaginable. HydroLogic designs systems to treat any water source including city water, well water, nutrient runoff water, waste water, and condensate runoff.

Work With Industry Experts In Water Filtration

Together, urban-gro and HydroLogic have the intensive technical knowledge base to solve the increasingly complex water issues that growers face. urban-gro, in partnership with HydroLogic, will analyze a cultivation facility's source water to design the best water filtration system for any operation. A properly designed water treatment system brings the stability, reliability and most importantly the consistency required of all feed formula inputs to ensure predictable top-shelf harvests.

Minimize Water Usage, Maximize Efficiency

HydroLogic's commercial division, HyperLogic, provides ultra-efficient reverse osmosis filtration systems and cutting-edge, plug-and-play, skid-mounted water treatment solutions for any size operation using even the worst quality source water.

The HyperLogic RO:

- Capable of producing a 1:4 waste water to product water ratio
- Ultra low energy membranes for power savings
- Expandable in capacity
- Advanced microprocessor for full automation and total control

HyperLogic Customizable Turn-Key Commercial Water Filtration Systems

- 2,000 to 20,000 + Gallons Per Day
- All Pre-Filtration Equipment Included
- Pre-Plumbed and Leak and Performance Tested

High Efficiency Reverse Osmosis Systems

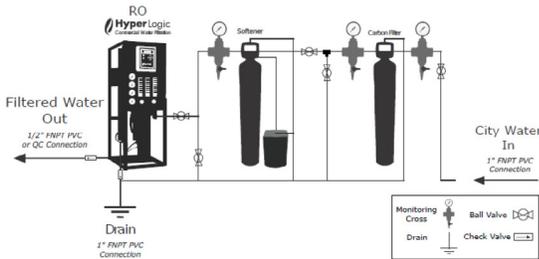

HydroLogic's plug-and-play commercial water filtration systems have a high efficiency reverse osmosis system with all pre-filtration equipment included. All equipment comes pre-plumbed and performance tested to minimize installation time and costs. Individual components are also available.

City Water RO Skid

- Carbon tank for chlorine and chloramine removal
- Water softener for water hardness removal
- Anti-scalant injection option for hardness and silica mitigation
- High efficiency RO system

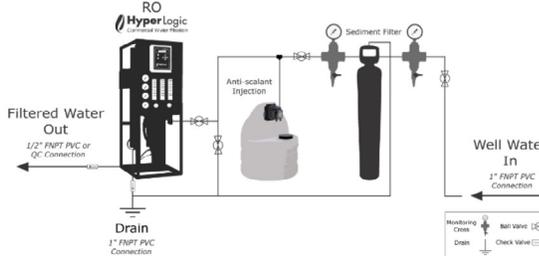

HyperLogic City Water Skid System

Well Water RO Skid

- Multi-media tank for sediment removal
- Anti-scalant injection for hardness and silica mitigation
- Options for iron, boron, or sulfur removal
- High efficiency RO system

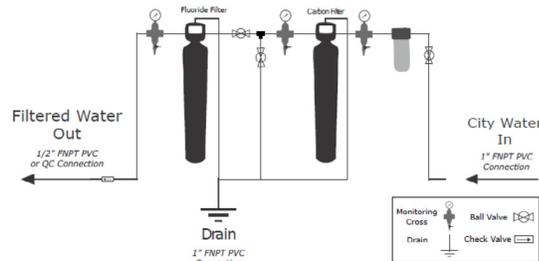

HyperLogic Well Water Skid System

City Pure Skid

- Optimized for low EC/TDS city water
- Bag filter for sediment removal
- Carbon tank for total chlorine and chloramine removal
- Special media tank for fluoride removal

HyperLogic City Pure Skid System

Automated Reclaimed Condensate System

- Designed to treat condensate runoff from climate control equipment
- Sustainable water treatment solution for any facility that normally puts condensate water from dehumidifiers and HVAC air handlers down the drain
- Produces a perfectly pH balanced product water that's contaminant free with zero pathogens and bacteria

HydroLogic also provides nutrient runoff water reclamation systems, waste water treatment solutions, on-demand delivery pumps, UV sterilizers, float switches, and valves.
